

Why group collaboration is useless

By Maceo

In a moon crash landing activity we were tasked with ranking the importance of creation items to aid our survival. We were first tasked with doing it alone then with a group. As a group we were unable to finish our rankings so for the sake of fairness I will only count the ones we finished as a group.

Lower score is better:

–	Score	Completed
Alone	1.86	Yes
Group	1.88	No

Not only did I do worse in a group but also we were unable to finish the list.
